

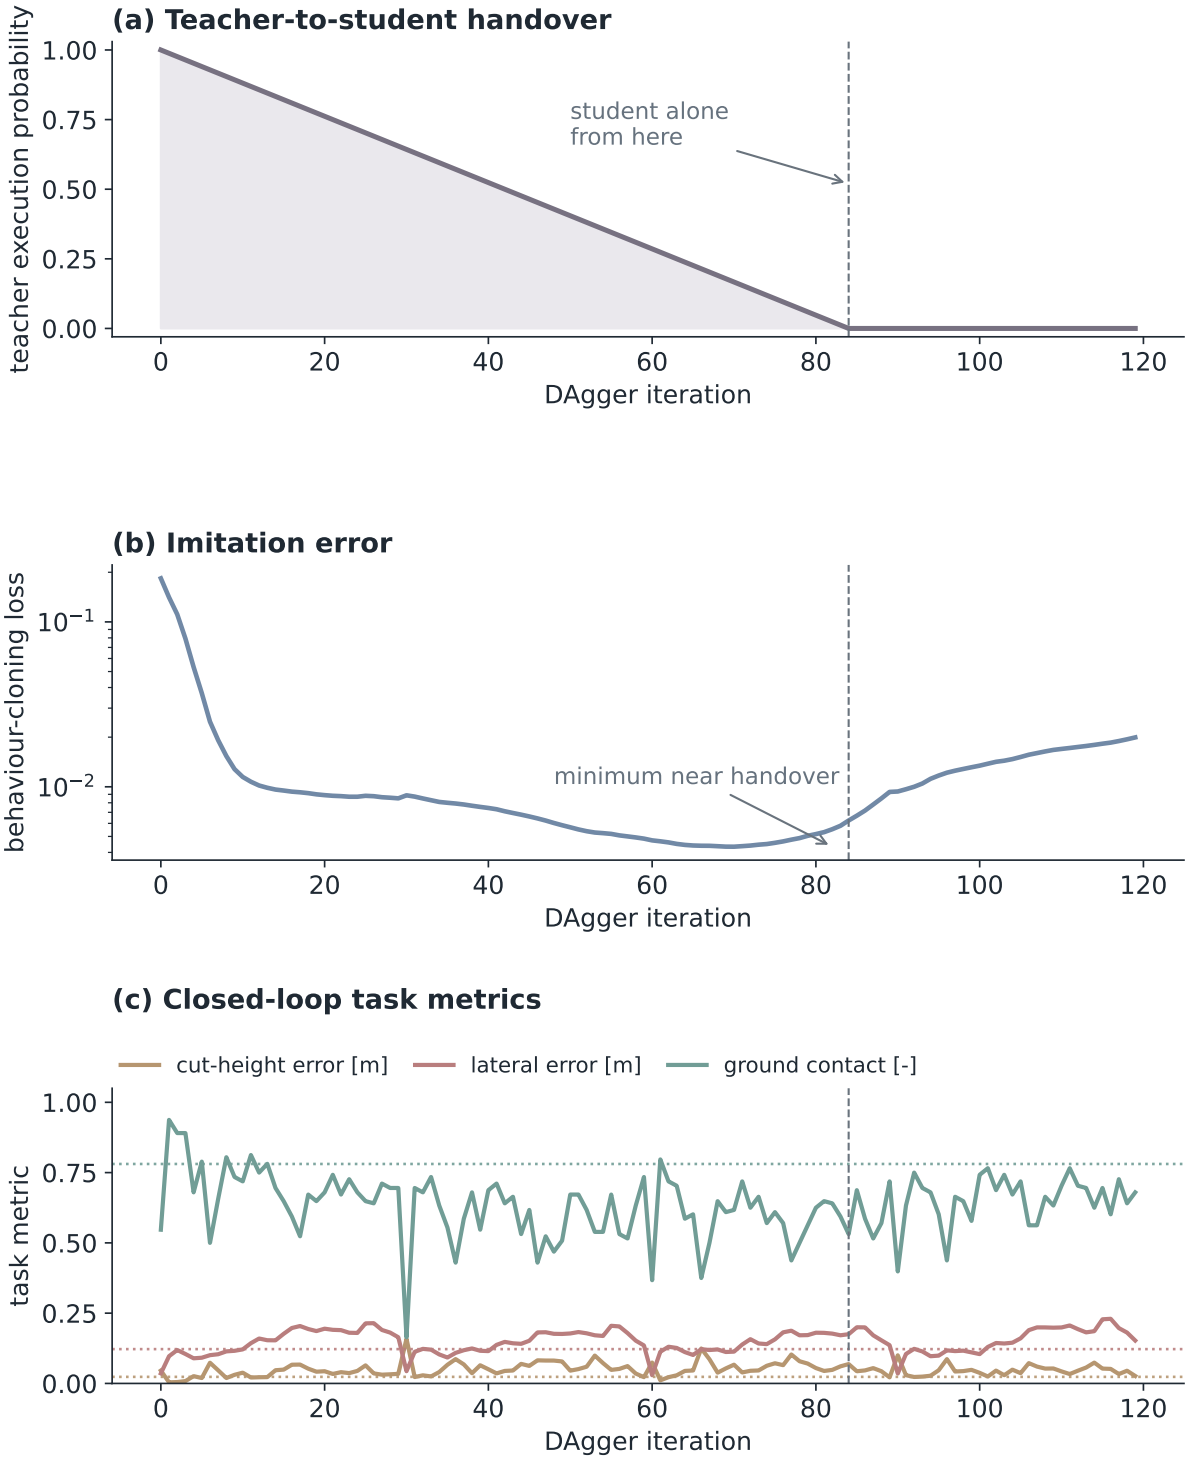

Figure 6.7: A measured distillation run for the R stack. (a) The teacher's execution probability falls to zero over the first 70 % of iterations. (b) Behaviour-cloning loss falls by over an order of magnitude under teacher execution, then rises as the student visits new states. (c) Cut-height error, lateral error and ground-contact fraction; dotted lines mark the teacher's preflight values from Table 6.1.
